Did we forget a birthday? Send us your pet's name and birthday and we'll add it to the birthday list

Unicorn Bones

Ingredients

1/4 cup of homemade (or ready-made unsalted unseasoned) chicken stock (see tips below)
1/4 cup low fat milk powder
1 egg
1 cup rice flour
For tinting-turmeric powder (yellow), beetroot powder (pink), wheatgrass powder (green), blue food coloring

Directions

Preheat oven to 350° and mix chicken stock, milk powder, egg and rice flour (add rice flour in slow increments and make sure not to let the mix get too dry). Once mixed, divide dough into smaller portions for tinting. Tint each section by adding the appropriate powder or coloring of your preference. Separate the dough into small pieces either by ripping and scattering them by hand or rolling each color flat and cutting them. Gather pieces of each color and squeeze them into a loose ball. Roll out each ball and use your favorite cookie cutter to cut into shapes. Bake for 12 minutes and let cool before serving. Thanks to <http://dalmatiandiy.blogspot.com/2017/04/homemade-unicorn-bone-rainbow-marbled.html> for the recipe!

***Please keep in mind that animals can have allergies to new products and ingredients just like humans. Always be cautious and aware when trying new foods with pets.

Breed of the Month

The Pug is one of the oldest known dog breeds and is thought to have originated around 400 BC. Most researchers agree that they stem from Asia and are descended from a shorthaired Pekingese. This happy-go-lucky breed is known for being goofy and playful and make great family pets, however, they are sensitive to low temperatures as well as high heat.
